

Quarterly Project Report

1. Team Identification

Project Team: Project Coordinators ▼

Budget Year: 2018

Quarter: Q1

2. Scope - Highlights of the Period

Person Days: 4

Accomplishments

- Completed and submitted delayed NSERC year-end Progress Report (December 18th, 2018)
- Organized and held a BaySys All-Hands Science Meeting (December 6th, 2018)
- Collected posters and presentations from the Arctic Change 2017 conference (Still in progress)
- Members of the Central Team successfully presented at Arctic Change 2017 conference
- Vital planning for the 2018 Amundsen, and CMO vessel campaigns began
- BaySys newsletter was completed and distributed
- Began to coordinate planning and organization of data management and sharing
- Submitted request for funding transfer extension for six months due to the Amundsen delay
- Final demobilization of the Amundsen occurred during October 2017

Missed Targets

- The Dec. 1st deadline for the NSERC progress report was extended and submission was made on Dec 18th.

3. Activity Tracking

| <i>ID</i> | <i>Task</i> | <i>% Complete</i> | <i>Status</i> |
|-----------|---|-------------------|---|
| | | | |
| 58 | Task 0.4 Field Mobilization | 90 | On track to be completed in Q3/Q4 of 2018 |
| 59 | Task 0.5 Field Data Acquisition and Pr... | 40 | On track to progress throughout the 2018 field ca |

4. Risk And Issue Updates

| <i>ID</i> | <i>Risk Event</i> | <i>Status</i> |
|-----------|-------------------------------------|---|
| | | |
| 18 | BaySys_CMO cruize delayed | This delay has been dealt with and a new campaig |
| 15 | Far-field runoff for NEMO modelling | Team 2 and Team 6 are nearing a solution for this |

5. Budget Information

CURRENT QUARTER SPENDING

Amounts are the cumulative totals to the end of the reporting period.

1. Salaries and Benefits

| | | |
|-----------------------------|------------|---|
| <i>a) Graduate Students</i> | \$0 | n/a |
| <i>b) PDF's</i> | \$0 | n/a |
| <i>c) Technical Staff</i> | \$26,729.1 | Salaries + Benefits: Nathalie Thériault; Claire Herbert |

2. Equipment or Facility

| | | |
|---|-----|-----|
| <i>a) Purchase or Rental</i> | \$0 | n/a |
| <i>b) Operations and Maintenance Cost</i> | \$0 | n/a |

3. Materials and Supplies

| | | |
|--|-----|-----|
| | \$0 | n/a |
|--|-----|-----|

4. Travel Expenses

| | | |
|-------------------------------------|----------|--|

Complete

Quarterly Project Report

1. Team Identification

Project Team: Marine Ecosystem ▼

Budget Year: 2018

Quarter: Q1

2. Scope - Highlights of the Period

Person Days: 0

Accomplishments

- Deschepper continued to develop the biological model of ice algae and phytoplankton. She also started to write an application for a mobility grant funded by Quebec FRQ-NT for a 4-month internship project in order to implement her biological model into the regional circulation model developed by Team 1 (Paul Myers' lab, University of Alberta). This will strengthen the communication between Team 1 and 3 and allow her to benefit from Team 1 expertise.
- Barbedo de Freitas continued working on his first thesis chapter using remote sensing analysis. The HQP interacted with other teams (Paul Myers and Jack Landy) concerning the use of sea-ice parameters and ocean modeling to improve and complement our analysis of phytoplankton dynamics in the Hudson Bay System. He also participated in the Arctic Change 2017 meeting in Quebec (December 2017).
- Lee continued working on nutrient data from fall and winter campaigns and the CAMP database. The comparison of nutrient data between rivers (regulated versus unregulated river and different watersheds) showed that nutrient sources are different depending on water types. Lee defended his project seminar to his committee in December. He also did an oral presentation about nutrient dynamics in Hudson Bay at the Arctic Change 2017 conference in Quebec (December 2017).
- Dalman finished to analyze chlorophyll a samples collected during both Churchill and Nelson campaigns. She is currently working on particulate organic carbon and nitrogen analyses, which will be ready soon.
- Matthes analyzed light data collected during the 2016 fall cruise onboard the Des Groseilliers and during the helicopter field survey off the coast of Churchill during the

2017 winter campaign. Moreover, underwater light profiles were compared with chlorophyll a concentration at several depth levels. Results showed that phytoplankton was not light limited in the surface layer during the fall cruise. As expected, chlorophyll a concentrations were very low during the winter campaigns due to low light environment resulting from the sea ice-covered water column.

- Schembri continued spatial analyses of fish in Hudson Bay system. She also completed a section of the Hudson Bay IRIS book related to fish with corrections and started the redaction of a section about zooplankton. Preliminary results were presented at the 2017 Québec Océan Annual Scientific Meeting in November (poster) and at the 2017 Arctic Change meeting in December (Poster and oral presentation). She won a honourable mention in Marine-Natural Science category for her poster.
- PierreJean continued the identification of infaunal and macrofaunal hotspots from the analysis of data obtained in 2003 and 2010 in Hudson Bay. The results were presented at the Annual Scientific Meeting of Quebec-Océan in Rivière-du-Loup (November 2017) and the poster won a mention (best poster presentation). PierreJean is also writing a subchapter of the Hudson Bay IRIS about benthic food webs, invertebrates and shell fish.
- Jacquemot continued to extract DNA and RNA samples collected in eastern Hudson Bay during the 2017 Amundsen cruise (leg2a) and started sequencing and analysis of results. Preliminary results were presented at the 2017 Quebec-Ocean General Meeting in Rivière-du-Loup in November (poster presentation) and at the 2017 Arctic Change meeting in Quebec City in December (oral presentation).

Missed Targets None for this quarter.

3. Activity Tracking

Draft In Progress

Quarterly Project Report

1. Team Identification

| | |
|----------------------|-----------------|
| <i>Project Team:</i> | NEMO Modeling ▼ |
| <i>Budget Year:</i> | 2018 |
| <i>Quarter:</i> | Q1 |

2. Scope - Highlights of the Period

| | |
|------------------------|---|
| <i>Person Days:</i> | 0 |
| <i>Accomplishments</i> | Major accomplishments include the completion of a flow chart documenting data input and process associated with NEMO modeling and integration with hydrological modelling. Additional major accomplishments include work completed by HQP and graduate students Natasha Ridenour on a freshwater budget for the HBC, analysis of eddies in Hudson Strait, and by Shabnam JafarikHasragh on an evaluation of summertime SSTs in the NEMO model in the HBC, thermodynamic and dynamic contributions to changes in sea ice volume, and a collaborative project on evaluation of ice and oceanographic variables generated by NEMO under varying atmospheric and hydrological forcing scenarios. Additional progress includes continued efforts to ensure integration of modeling efforts between Teams 2 and 6, and with observational teams to address the BaySys objective of determining the relative impacts of climate change and regulation on freshwater-marine coupling in Hudson Bay. |
| <i>Missed Targets</i> | Historical NEMO simulations and sensitivity analyses will be launched once consistent forcing datasets are determined for Teams 2 and 6 and bias correction. |

3. Activity Tracking
